

# INDUSTRIAL MONITORING

LONCEL PROVIDE A RANGE OF INDUSTRIAL MONITORING SYSTEMS VIA OEMS AND AS AFTER-MARKET OPTIONS FOR ABOVE AND BELOW GROUND STORAGE TANKS AND SILOS.

The standard system consists of a cellular base station and a cabled sensor inserted into the top of the tank. This is wired to a control station, either directly or via a junction box.

The control station requires a mains supply or in remote locations a solar panel system can be added as an extra option.

Tank monitoring data can be connected to the customer's own web page with automatic reports received from the tank at up to 15 minute intervals.

Two low and two high level set-points can be programmed. Low level alerts can be sent to any person by either email or text message. Upper level alerts can sound an alarm or strobe if required, or be used to stop a transfer pump.

*Tank monitoring at your fingertips.*  
**Work smarter, not harder.**
